ANOTHER PROSPEROUS WEEK AMONG THE GOLD MINES OF MANHATTAN

(From the Manhattan Post.)

The milling of one dump of ore from the Swanson lease amounting to about 800 tons is now being concluded and 300 tons hauled to the Priest mill some months ago, are now being treated at the War Eagle mill, when this is completed the exact returns will be shown. Samples taken during the mill run indicate that the average value of the ore is about \$25 a ton.

Operations at the lease prove that the ore body is bigger on the 250, the lowest level, than in any other part of the mine. At this depth the vein is 5 feet wide, assaying from \$25 to \$30 a ton, is strong and well defined and gives every indication of permanency. In addition to the opening up of the mine on the 250 level, ore is being stoped on the 150 and the 200, both these levels showing ore averaging from \$25 to \$30 a ton.

Eugene Howell, cashier of the Tonopah Banking corporation and a director of the Manhattan Earl Mining company, owning the Earl claim, on which this lease is operating, visited the property last Saturday and was highly gratified with the splendid showing in the mine.

May Strike Mineral Hill Ledge.

The tunnel on Mineral Hill estate is in 112 feet and it is expected that the ledge will be reached any time. The last thirty feet has been made through some of the hardest formation ever opened in the district. The tunnel will be continued through the ledge when drifting will be commenced. A depth of between 50 and 60 feet will be attained at the point of intersection and in drifting every foot of progress will increase the depth about six inches. It is the intention of the company to drive this drift under the hill until a depth of about 250 feet is attained.

Progress on "Con." Lease.

Excellent progress is being made at the Mudgett-Wittenberg lease on the Silver Pick claim of the Manhattan Consolidated. The raise to surface has been completed, giving a new vertical shaft to the 65-foot level, and the electric hoist which arrived this week is being installed and in a few days actual mining and the production of ore will commence.

At the Kendall lease, on account of the bad condition of the old shaft, a new working shaft is being made, the leasers will be again taking out high grade ore in a few days.

Vucanovich Lease.

The workings in the Vucanovich lease on the Forman fraction broke into high-grade ore this week in a winze now being sunk from the 150-foot level to determine the trend of the ore shoot. The winze is now being sunk on two feet of ore averaging \$87 a ton, proving that the values are increasing with depth as the ore milled from the upper workings averaged \$29 a ton. The shaft will now be sunk a further 50 feet and the ore opened up on the 200-foot level.

Manhattan Stocks.

The stocks of the Manhattan Mining companies are increasing in favor on the San Francisco stock exchange and Manhattan Consolidated is showing considerable activity, many thousands of shares having changed hands this week at 10 cents. On the 5th inst. particular attention was paid to the low price of the stocks of this camp and in recommending several stocks placed Manhattan Con. first on the list. It was then 6 cents and it now looks as if it would soon be selling at 20 cents. Crescent and Big Four ought both to be selling at much higher prices.

Next Milling Will Be Best.

The ore shoot at the White Caps lease continues to carry splendid values as depth is attained, the entire width of the shaft now averaging over \$65 a ton, and there is now every reason to believe that the next milling will give even better returns than the last. It is understood that the stock of this company will shortly be released from the pool and in anticipation of this it is in considerable demand.

Sinking on Jumping Jack.

At the Putman-Kendall lease on the Jumping Jack sinking from the surface on the ore shoot has been resumed and a depth of about 25 feet has been attained. At this point the ore has widened out between two well defined walls, giving every evidence of permanency and carrying about the same average values of \$50 a ton. Good progress is being made in the drift from the shaft the face of the workings being in low grade ore.

Steady Work on Mineral Hill.

The development of the Barr-Thomas lease on Mineral Hill ground is being continued by the East Side Mining and Leasing company by means of two drifts from the main shaft, and while the high grade is not so much in evidence, every day increases the supply of ore on the ore pile. Every effort is being made to get sufficient ore out to justify a mill run during September.

Union No. 4 Lease.

The Ferguson-Gillan-Flourd lease is now being opened up at depth by a winze now being sunk on the ore from the 65-foot level. The ore is increasing in width and its splendid values are well maintained, some high-grade specimen ore having been raised to surface this week. The water in the lease is being handled through the Rose-Nash shaft on which a pump has been installed.

Big Four Lease.

At the Poak-Steen-Cicala lease on the Big Four a big station is being cut on the 400-foot level and the crosscut from here to the ore has been run 30 feet and is expected to cut the vein in about another 20 feet. Good ore is being opened up on the upper levels of the mine.

Macdonald Shaft.

The shaft at the Macdonald lease on the War Eagle is now down 70 feet, the vein still looking good, with well-defined walls. The ore is still carrying most encouraging values and the shaft will be continued to the 100-foot level before drifting on the vein.

AT ROUND MOUNTAIN.

The Daisy property still continues to get increased values in the "glory hole" of the old Mulholland lease. A second test mill run which was made this week has given the management great encouragement, the ore giving much better values than was anticipated.

The Round Mountain Mining company has resumed work on the "glory hole" on which operation ceased for a few days owing to improvements which were made to handle the output to better advantage.

The annual work on the Gold Trail has been finished, but it is probable that from the showing made the owners will do something on the property in the near future. The placer on this property is equal to that of any in this district and there is no doubt but what there will be a large amount of money made if the water question can be solved.

Charles Kanrohat has been called to Salt Lake by parties with whom he has been negotiating with a view of a deal on the Jefferson Gold & Silver Mining company's property. Mr. Kanrohat took a number of samples with him and his parting words were: "I'll surprise you when I get back." That this property is rich in values goes without saying, for over thirty years Mr. Kanrohat has worked the property single-handed and has made a snug fortune out of it.

A force of men is now employed doing the annual work for the year 1911 on the Simplex group, which adjoins the Fairview and Daisy mines. A shaft is being sunk close to the lines of the Fairview in an effort to cut the Fairview ledge.
